

Graduation from UNNC

13 Jul 2025

Shuhao Wang

July 2025 marked the culmination of Shuhao's transformative four-year journey at the University of Nottingham Ningbo China, where he graduated with First Class Honours in Mechanical Engineering. This period was defined not only by academic rigor but by a profound journey of personal growth. From the challenging fundamentals of dynamics and thermodynamics to the exhilarating hands-on projects in robotics and sustainable design, each step was a lesson in resilience and innovation.

Looking back, this achievement stands as a collective triumph. He is deeply grateful to the dedicated professors, whose passion for their subjects made complex theories captivating and who offered guidance both in and out of the lecture hall. Special thanks are also owed to the supportive senior students, who generously shared their wisdom on navigating university life and academic challenges. Most importantly, to the friends who became a second family—through countless late-night study sessions in the library, collaborative breakthroughs on demanding projects, and shared laughter that eased the pressure—this journey would not have been the same without them. This chapter has come to a close, but the knowledge gained, relationships built, and memories created will undoubtedly be the foundation for all that lies ahead.
